Reading #4: *You and Your Data* 26

# Introduction to Active Reading

**Important notes and benchmark dates to keep in mind:**

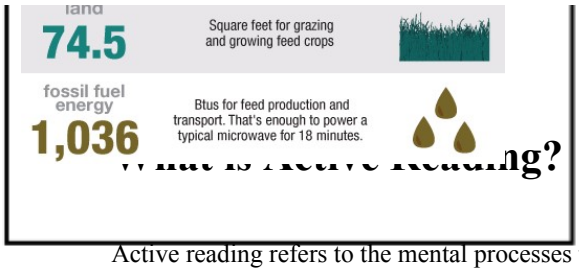

**Actively read** texts 1-2 by the end of week 4. Read texts 3-4 by the end of week 7. One text in the Reading Midterm exam will be taken from texts 1-4.

Figure 3 What it takes to produce ONE traditional burger.

ompreensive guide as to what active reading entails and
nplement active reading strategies. Please be sure to refer
e semester in order to give yourself the best opportunity to
g Portfolio grade.

tes enables you to become an active reader and is an

# What is Active Reading?

Active reading refers to the mental processes that highly effective readers use when approaching reading. It requires a reader to read critically by focusing on the material to understand and actively engage with the material by being aware of one's own thought process when reading. Through active reading readers gain greater critical thinking skills that makes things easier to understand and enables readers to retain information for a longer period.

*What is Active Reading* sourced and adapted from MPC reading skill sheets https://www.mpc.edu/academics/academic-divisions/humanities-division/programs-centers/reading-center/handouts.

# Active Reading: General Strategies

### Annotating

Marking and highlighting a text during reading is a way for readers to stay engaged with a reading and comprehend the reading at a deeper level. Readers record responses to the text during the act of reading and write ideas and personal comments in the margins.

### Previewing

Readers look over the reading material to become familiar with topic and organization before actually beginning to read it. This helps make the reading an easier, faster, and more effective learning experience.

### Skimming

The reader looks quickly through material to gain an overall view of text without reading everything.

### Scanning

The readers look through a text to locate specific information without reading everything, such as names, dates, and figures/tables.

### Reading on

Readers skip an unfamiliar word and read further to provide sufficient context needed to determine the meaning of an unknown word.

### Re-Reading

A reader re-reads the text again for deeper understanding, word identification and fluency.

### Monitoring Comprehension

Readers recognize when they don't understand parts of a text and take necessary steps to restore

meaning. Monitoring includes asking clarifying questions if something remains unclear, re-reading if there is some confusion, looking for answers and adjust reading strategy to understand material.

*Active Reading Strategies* sourced and abridged from MPC reading skill sheets
https://www.mpc.edu/academics/academicdivisions/humanities-division/programs-centers/reading-center/handouts.

### Determining Importance

Readers distinguish between what information in a text is most important versus what information is interesting but not necessary for understanding. Knowing the primary purpose of reading textbooks and nonfiction is important to determine importance.

### Author's Purpose

Being aware of the author's purpose allows a reader to understand the reason and intent of the writing.

### Paraphrasing

Readers re-state and re-write text in their own words to capture the author's main idea and details of the reading. This strategy forces readers to pay close attention to the author's ideas and helps improve the readers' level of understanding.

### Summarizing

Readers reduces larger texts to focus on important elements by identifying key elements and condensing important information into their own words to solidify meaning.

### Questioning

Readers engage with the text by asking questions about the text and the author's intentions. They then seek information to clarify and extend their thinking before, during and after reading.

### Synthesizing

Readers piece together and combine information from their own knowledge of how life works with the information they have gathered and understood from the text to create their own perspective and original insight.

### Evaluating

The reader forms an opinion and judgment about the writing. They determine whether the argument (if there is one) is well or poorly structured, supported, or detailed; whether the writing style is appropriate, efficient, or well-toned--whether the audience is appropriately addressed; or if the author is biased in any way and how this may have affected the writing.

# Active Reading: Examining a Text

When studying a text closely, consider the following points. Note that reading exam questions often test your ability to understand these elements of a text:

**1. What is the text about / the main idea?**

Look at the title, sub-title and any pictures, graphs or tables

Read the introduction. Look for a thesis statement (a sentence showing what the article is about). Note that in some academic texts this could be in the second paragraph.

Skim the paragraphs. What are most paragraphs about? The balance of information often reflects the main purpose of the article.

Read the conclusion. It should reaffirm your thoughts on the main idea of the article.

Note that in test conditions, some students prefer to answer these types of questions last after reading the text in more detail from answering the other questions.

**2. What type of text is it?**

Is the writer just reporting the facts of news, an event or research; or are they describing the causes and / or effects of something; or are they providing a comparison or giving an opinion?

Where would you see this type of text? The topic, length and use of vocabulary should indicate if it is an article aimed at the average reader (e.g. a newspaper article) or the more academic reader (e.g. a science journal).

What tense is used? Does it change? Why?

**3. What is the main idea of each paragraph?**

It's important, especially in test situations, to understand the main idea of each paragraph. Look for the topic sentence (usually first or second).

The main idea should be supported with an explanation and / or examples.

**4. Does the writer include facts (statistics, dates, people)?**

If so, what do these statistics mean? It's important to understand them. If graphs or tables are provided with a text, it's vital to read and understand them.

If dates are given, why? They often indicate something important.

If people are mentioned, why? Are they experts, witnesses or giving opinion? Again, it's important to consider why individuals or organizations are mentioned in a text and what role they play.

**5. Does the writer suggest or imply anything?**

Sometimes a writer suggests something (e.g. an opinion) without saying it directly. Can you see any examples in the text?

**6. Is there any unknown vocabulary?**

Again, underline any unknown/unsure vocabulary. Read the sentences before and after the word.

Does any information help to guess the meaning of the word? ☐

## Text 1: Previewing

Before you begin to read a text, you should preview the text. Previewing means looking at the titles, sub-titles, visuals and topic sentences. You can also skim the introduction and maybe the thesis-if it has one. It also gets the *wheels in your brain turning*. We probably already know something about the topic of the text. This allows you to predict the content and organization of the text. It, perhaps, allows you to understand the authors purpose for wring the text, and his position if it is an argumentative text. This makes it easier and faster to read the text because the text is often confirming what you already know.

Look at the information and visuals from Text 1 **before** you read it. Let's see if we can accurately predict what the text is about. It does not matter if your answers are wrong at this stage.

**Title: Why Lab-Grown Meat Is the Future of Food**

What is lab grown meat?

Why is it the future? How many ideas can you come up with? Try for at least 2.

Based on the title and the visuals, what do you think the text is about? Hopefully, it is a lot more specific than your previous prediction.

Figure 1. Look at Figure 1 carefully. What is the purpose of the figure? What does it tell us?

Make a prediction. Based on the title and

---

Look carefully at Figure 2 and Figure 3. Think about the following questions. What information is included in the figures?

can 'refine' our prediction later.

Skim (read quickly) the introduction and topic sentences.

**Introduction**

On 5 August, a select group of scientists, members of the media and food lovers will be invited to try their first taste of *in vitro* meat at a ceremony in London. Dr Mark Post, a bio-scientist from the University of Maastricht in the Netherlands, will host this taste-testing event that offers the first-ever opportunity to sample the hamburger that he has grown in his laboratory from muscle tissue from a cow. It may surprise readers to learn that, among the funders of *in vitro* meat development in various countries, is 'People for the Ethical Treatment of Animals' (Peta) US.

**Topic sentences**

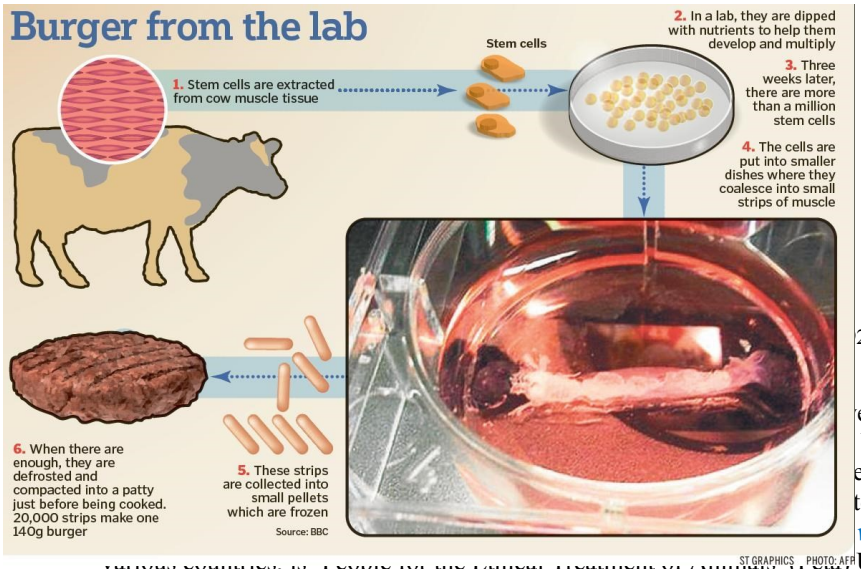

(B) Why would a vegetarian-supporting organisation actually finance the production of meat?

(C) Cultured meat is made from the same animal tissue that makes up conventional meat.

(D) In addition, cultured meat can reduce climate change in more ways than one.

(E) But despite the vast amounts of land, water and fossil fuels that we devote to raising animals for food, nearly 1 billion people still do not have enough food.

Write a short paragraph. (Grammatically correct, capital letters, full stops, spelling, etc.)

2.html>.

ers will be invited to try bio-scientist from the ent that offers the first- tory from muscle tissue ***vitro*** meat development in US.

Figure 2.

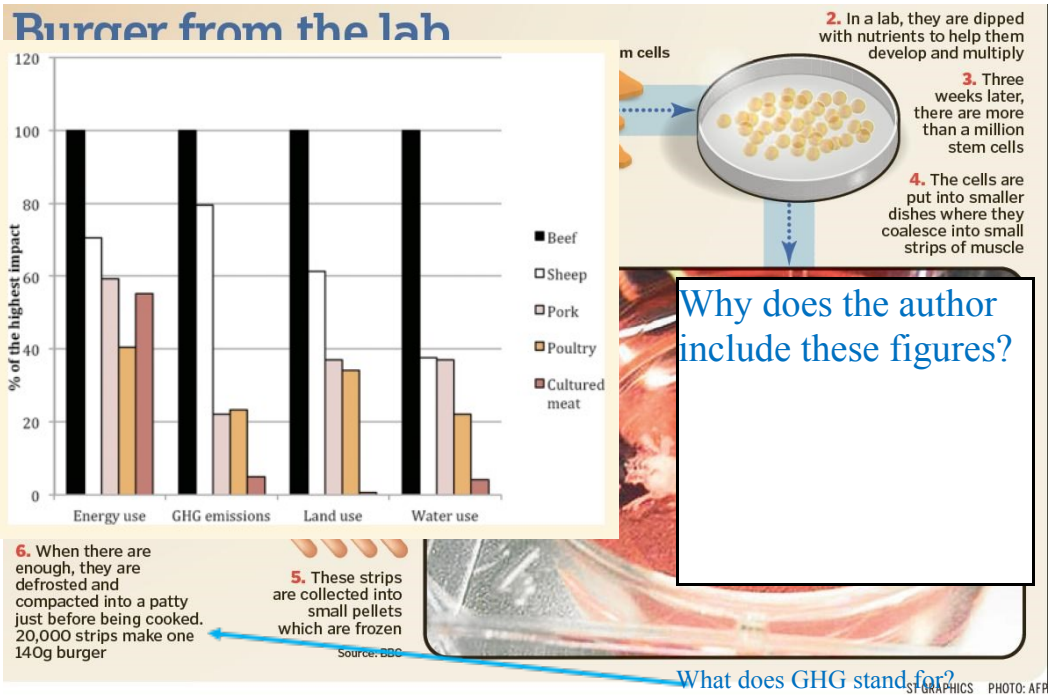

**Figure 1. How to produce cultured meat in the laboratory**

Why does the author include these figures?

What does GHG stand for? What do you know about GHG emissions?

(B) Why would a vegetarian-supporting organisation like *Peta* actually support the production of meat? For much the same reason that Bill Gates is supporting companies that are producing soya-based ***artificial*** meat taste-alike products: because if we want to reshape the future of the environment and still produce enough food to feed the world's ***booming*** population, we must reshape the future of meat production. Clearly, our main interest is in ending animal suffering, so we have put aside our dislike of meat eating for a higher cause: to support a ***breakthrough*** that could mean a far kinder world for billions of animals.

(C) ***Cultured*** meat is made from the same animal tissue that makes up conventional meat. But instead of being grown in an animal's body, it is grown in a nutrient-rich, pristine environment. The rooms in which the meat is to be grown, called "carneries", can be several floors high, eliminating the need to cut down trees and clear forest land to make more room to grow the crops to feed farmed animals. The UN cites meat production as a "key factor" in **deforestation**, especially in Latin America, where vast areas of rain-forest land have been cleared for raising animals. Today, approximately 30% of the Earth's land mass is used directly to raise animals or grow feed crops for them, as opposed to only 4% for humans.

What does Figure 3 illustrate? Why does the author include this information?

(D) In addition, cultured meat can reduce climate change in more ways than one. Together, carbon dioxide, nitrous oxide and methane cause the vast majority of global warming. Raising animals for food is one of the largest sources of carbon-dioxide emissions and the single largest source of both nitrous-oxide and methane emissions. Producing ***enormous*** amounts of grain to feed to farmed animals, then killing and processing the animals, as well as transporting and storing their meat, requires massive amounts of fossil fuels. This means meat production produces massive amounts of carbon dioxide. In addition, the billions of animals on factory farms produce methane during digestion, and as the animals' waste decomposes, it creates a staggering 65 per cent of the world's nitrous oxide emissions. Scientists estimate that large-scale cultured meat production would generate 78 to 96 percent ***less*** greenhouse gas than would conventional meat production methods.

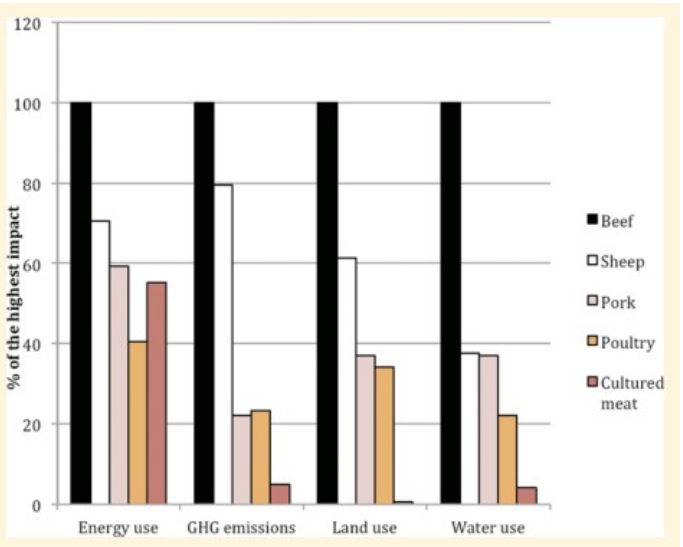

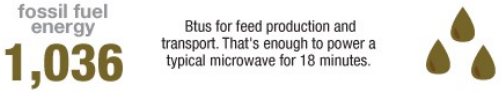

**Figure 2. Comparison of the environmental impact of different food sources**

(D)
an
foo
foo
pro
gro
tho
sig

(E) Meat produced in a laboratory is also far safer for human consumption. The ***aseptic*** environment is far removed from the dirty conditions of factory farms and live animals. This eliminates the risk that the meat could be infected with bacteria such as

E. coli, campylobacter and salmonella. Zoonotic diseases (diseases coming from animals) such as Mad-cow disease and avian flu influenzas cannot spread in an *in vitro* laboratory the way they can on a factory farm or at a live-animal market.

**Paragraph (A)**

Do not use a dictionary.

What do the following words mean? You do not have to be 100% correct. If you have 60-70% of the meaning, you can continue reading.

in vitro
sample

Complete the following 2 sentences.

1. Scientists, the media, and food lovers are coming to London …

2. Peta is an organization which is concerned with …

3. Why does the author think readers may be *surprised* that Peta is attending this event?

**Paragraph (B)**

Do not use a dictionary.

What do the following words mean? You do not have to be 100% correct. If you have 60-70% of the meaning, you can continue reading.

artificial
booming
'breakthrough' refers to

The topic sentence in paragraph (B) asks the following question: Why would a vegetarian-supporting organisation like *Peta* actually support the production of meat?

In your own words, answer the question.

**Paragraph (C)**

***Cultured*** meat. In the text there are 2 synonyms for ***cultured:*** ***and*** *deforestation* means

Complete the following sentences. Make sure the sentence is grammatically correct.

1. By producing the meat in specially-built tall buildings, we can make it unnecessary to

2. Latin America is an example of

3. Only 4% of the land is used to produce crops for humans

**Paragraph D**

How many synonyms can you find for the word ***enormous***?

1. , and are the three greenhouse gases mentioned in the paragraph.

2. According to the text:

A. Meat production is the largest source of carbon-monoxide emissions.

B. Meat production is the single largest source of both nitrous-oxide and methane emissions.

a. Both statements are TRUE.
b. Both statements are FALSE.
c. Statement A is TRUE and statement B is FALSE.
d. Statement A is FALSE and statement B is TRUE.

3. 65% refers to

4. 78-96% refers to

5. Complete the following sentence.

By moving meat production away from traditional methods to lab-grown methods, …

**Paragr**

What is the purpose of paragraph E?

**Paragraph F**

*aseptic* m

1. Why d

2. A zoonotic disease is a disease

3. **What do you think?**

Choose **one** of the prompts/questions below and write a paragraph.

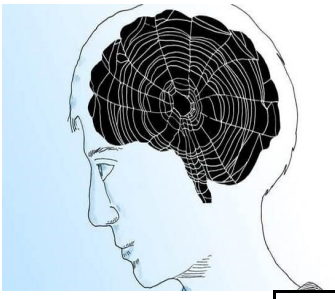

1. Would you eat lab-grown meat? Explain your answer.
2. Would lab-grown meat be successful in KSA?
3. Write a paragraph arguing **against** lab-grown meat.

## Text 2: Is the internet killing our brains?

**The web gives us access to endless information. What impact does this have on our memory, and our attention spans?**

Burnett, D. (2016, October 8). Is the internet killing our brains? The web gives us access to endless information. What impact does our [illegible] www.the[illegible]6/oct/08/is -the-internet-killing-our-brains

**(A)** _____

**T**hroughout history, people have always worried about new technologies. The fear that the human brain cannot ***cope*** with the ***onslaught*** of information made possible by the latest development was first ***voiced*** in response to the printing press, back in the sixteenth century. Swap "printing press" for "internet" and you have the exact same concerns put forward today in the mainstream media, and usually focused on children. But is there any truth to these claims? Or are they just rumours with no basis in facts? There are several things to ***bear in mind*** when considering

**(B)** _____

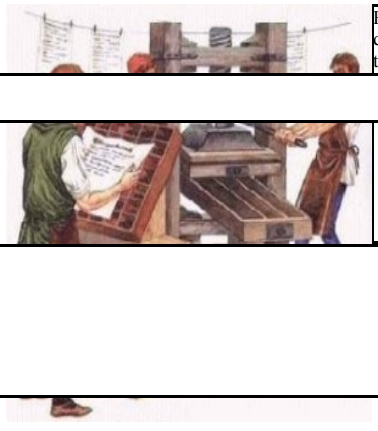

Figure 1. The printing press. Many mod ern day criticisms of the internet were made about the invention of the printing

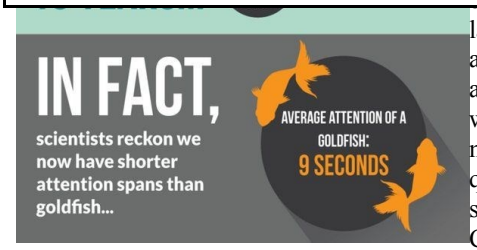

First, don't forget that "the internet" is a very ***vague*** term. [illegible] applications across so many formats. You could, for instance, develop a gambling addiction via online casinos or poker sites but it would be difficult to argue that the in[illegible] ju[illegible] pr[illegible] in[illegible] direct, constant and wide ranging access to information than ever before. So how could, or does, **this** affect us and our brains?

**(C)** _____

So how does the brain deal with this information overload? The brain doesn't actually process every single thing our senses present to it; for all its power and complexity, it just doesn't

too much information?

layer that enables us to focus our attention on the task at hand, and an unconscious layer that shifts attention towards anything our senses pick up that might be significant. So while this dual system serves a very important purpose it can make focusing 100% on something quite a challenge. In an internet environment, these secondary stimuli, pop-ups, email alerts etc., occur on a frequent basis. Contrast this with the frequency of stimuli received when reading a traditional book or e-reader. The **implications for students** are obvious.

**(E)** _____

The internet, however, provides a very quick and effective distraction. We can be looking at something enjoyable within seconds, which is a problem, ***given*** that much work in the modern world is done on the same device we use to access the internet. We can move from work to having fun at the click of a button. But it would be unfair to say that the internet is responsible for distracting us from work. The brain's attention system and preference for new experiences existed long before the internet did. The internet is just something that makes accessing these new experiences much easier.

Match the heading with its paragraph. The first has been done for you. There are 5 paragraphs, but you have 8 headings. 3 are not needed.

1. Is the Internet the problem? _____
2. What about my attention span _____
3. Change can be frightening _____A____
4. The Internet and memory. _____
5. Too easily distracted: Is it us or the Internet? _____
6. Too much information. _____

7. Improving education _____

8. The development of the printing press _____

**Paragraph (A)**

Do not use a dictionary.

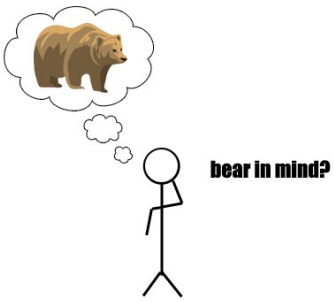

What do the following words mean? You do not have to be 100% correct. If you have 60-70% of the meaning, you can continue reading.

cope

onslaught

voiced

bear in mind

1. Why does the author mention the printing press?

**Paragraph (B)**

Do not use a dictionary.

What do the following words mean? You do not have to be 100% correct. If you have 60-70% of the meaning, you can continue reading.

vague un_ _ _ _ _

context si_ _ _ _ _ _ _

1. Why does the author mention a 'gambling addiction' in the text?

2.What does '**this'** refer to?

_____

**Paragraph (C)**

Complete the following sentences

1. In order to avoid overload, the brain …

2. Because the brain does not have the capacity to process all this information,

3. By filtering out the unimportant information, the brain

4. Paragraph (D)

1. What does it mean ‘the picture is unclear’?

2. There are two layers in our brain’s attention system: an , and a

3. Which of the layers causes us to be easily distracted?

4. What are the ‘**implications for students’**?

**Paragraph E**

1. What ‘danger’ does the author highlight in the paragraph

2. Look at the word ***‘given’*** in the paragraph. It is a very useful word to use in an academic essay.

Complete the following sentences. **(They are not based on the text.)**

***A. Given*** the amount of violence children are exposed to on the internet, it is not surprising

***B. Given*** the price of petrol these days,

***C.*** I am surprised that KSA is considering moving to renewable energy ***given***

***D.*** The math exam must have been very difficult ***given***

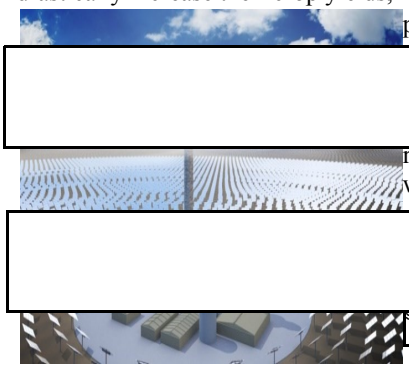

***E.*** In your opinion, has the internet been a positive or negative influence? (Write a well-organized grammatically correct paragraph.)

## Text 3: Seawater greenhouses to bring life to the desert

Fig 1. The Sahara Forest Project: the most recent attempt to **'green'** the de-

(A) The world is not short of water; it is just in the wrong places and too salty. Converting seawater to fresh water, in the right places, offers great potential for agriculture. Vast greenhouses that use seawater to grow crops could be combined with solar power plants to provide food, fresh water and clean energy in deserts, under an ambitious proposal from a team of architects and engineers. The project aims to overcome the region's inhospitable conditions to help farmers drastically increase their crop yields, providing them with a consistent, sustainable income. A worthwhile

s rays and generate heat and electricity. These hybrid installations would, according to their designers, turn deserts into lush patches of

greenhouses across the desert

(C) Plants cannot grow in deserts because of the extreme temperatures and lack of nutrients and water. Plants need light for growth but they don't like heat beyond a certain point. Above a particular temperature, the amount of water lost through the holes in their leaves, called **stomata**, gets so large that a plant will shut do

Fig. 3 Releasing humid air produced by the greenhouses pr permits the growth of some tough

(D) The greenhouses work by using the solar farm to power seawater evaporators, which cool the air and

then pump the damp, cool air through the greenhouse. This reduces the temperature by about 15°C compared to the external ambient temperature and increases humidity. This reduction produces optimum ter

(E) The Sahara Forest Project will use water from the Red Sea to produce fresh water for the crops and to grow algae in open ponds for fuel and food. Because each 10,000 square meters of seawater greenhouse evaporates 50 tons of water daily, the greenhouse will help restore vegetation on the surrounding arid land through releasing the excess humidity to create a cooler and more humid microclimate downwind of the greenhouse**.** The **"lost"** humidity will also increase the chance of rainfall in the area.

(F) This 'artificial' environment created by the greenhouse opens up the possibility for commercial cultivation of halophytes, plants that can survive or even thrive in salty growing conditions. These plants can be grown as animal fodder or as energy crops for biofuel production. They also serve as soil stabilizers, preventing sandstorms and soil erosion.

(G) Is it possible these seawater greenhouses are really the 'ultimate green solution'? Using a renewable energy source, they produce food, energy and drinking water while at the same time converting barren, arid desert into biologically productive land. The potential of these desert technologies is huge. Concentrated solar power mirror arrays covering just 1% of the Earth's deserts could supply a fifth of all current global energy consumption. And one million tonnes of sea water could be evaporated every day from just 20, 000 hectares of greenhouses. It seems so easy. It seems so simple. It almost seems too good to be true.

**In the**
**asked**

**1. The purpose of paragraph (A) is to…**
a. supp
b. illus
c. highlight the problem of water distribution.
d. introduce the Sahara project.

**2.**

c.
d. if successful, the economic benefits could be huge.

**4. In paragraph (B) 'marry' means almost the same as …**
a. combine.
b. build.
c. design.
d. replace.

**5. Paragraph (C) mainly explains …**
a. why photosynthesis is important for plant growth.
b. the relationship between temperature and water loss in deserts.
c. the difficulty the desert environment creates for plant growth.

d. the need to control temperatures in deserts.

**6**. **In paragraph C 'stomata' means …**
a. drops
b. leaves
c. holes
d. degrees

**7. Photosynthesis stops because …**
a. of temperature fluctuations.
b. the stomata get too big.
c. of too much sunlight.
d. of excessive water loss.

**8. Paragraph (D) mainly describes …**

a. how the greenhouses achieve the best conditions for plant growth.
b. the characteristics of deserts which make them unsuitable for plants.
c. how the greenhouses use seawater evaporators.
d. how the latest technology is used in the greenhouses.

**9. The word "lost" in paragraph E appears in quotation marks because …**
a. the water returns to the sea.
b. it is a short quotation.
c. the water is deliberately released.
d. the water escapes from the greenhouse.

**10. Which of the following is NOT a consequence of the "lost" humidity?**

a. Rainfall may increase.
b. Seawater consumption will rise.
c. Temperatures will fall.
d. Humidity will increase.

**11. Halophytes are plants that …**
a. live in desert environments.
b. tolerate high temperatures.
c. live in salty environments.
d. prevent sandstorms.

**12. In paragraph (F) 'thrive' means …**
a. live
b. die
c. do well
d. grow

**13. The main objective of the Sahara Forest project is …**
a. to improve lives and transform the desert.
b. to reduce dependence on local water resources.
c. to create economic development.
d. to irrigate the desert using seawater.

**14. The author finishes the text with**, *"It almost seems too good to be true."* **Why? What can we infer from this statement?**

**Text 4**

## Pre-Reading Activities

The title of the reading is:

# You and Your Data

(Mandatory)

1. Based on the title, what do you think the text is about?

2. Based on the title, what type of text do you think this is?

3. Based on the title, what sort of specific information do you think you are going to read about?

## Vocabulary Preview:

Based on your prior knowledge, can you define any of the following words?

digital

compromising
accessible
demanding consent

**READING #4**

# You and Your Data

**A.** As the internet and digital technology become a bigger part of our lives, more of our data becomes publicly accessible, leading to questions about privacy. So, how do we interact with the growing digital world without compromising the security of our information and our right to privacy?

Imagine that you want to learn a new language. You search 'Is German a difficult language?' on your phone. You click on a link and read an article with advice for learning German. There's a search function to find German courses, so you enter your city name. It asks you to activate location services to find courses near you. You click 'accept'. You then message a German friend to ask for her advice. When you look her up on social media, an advertisement for a book and an app called German for Beginners instantly pops up. Later the same day, while you're sending an email, you see an advert offering you a discount at a local language school. How did they know? The simple answer is online data. At all stages of your search, your devices, websites and applications were collecting data on your preferences and tracking your behavior online. 'They' have been following you.

**B. Who uses our data and why?**

In the past, it was easy for people to keep track of their personal information. Like their possessions, people's information existed mostly in physical form: on paper, kept in a folder, locked in a cupboard or an office. Today, our personal information can be collected and stored online, and it is accessible to more people than ever before. Many of us share our physical location, our travel plans, our political opinions, our shopping interests and our family photos online – as key services like ordering a takeaway meal, booking a plane, taking part in a poll or buying new clothes now take place online and require us to give out our data.

Every search you make, service you use, message you send and item you buy is part of your 'digital footprint'. Companies and online platforms use this 'footprint' to track exactly what we are doing, from what links we click on to how much time we spend on a website. Based on your online activity, they can guess what you are interested in and what things you might want to buy. Knowing so much about you gives online platforms and companies a lot of power and a lot of money. By selling your data or providing targeted content, companies can turn your online activity into profit. This is the foundation of the growing industry of digital marketing.

**C. Can you protect your data? Yes … and no!**

Some of the time our personal data is shared online with our consent. We post our birthday, our photographs and even our opinions online on social media. We know that this information is publicly accessible. However, our data often travels further than we realize, and can be used in ways that we did not intend. Certain news scandals about data breaches, where personal data has been lost, leaked or shared without consent, have recently made people much more aware of the potential dangers of sharing information online. So, can we do anything to protect our data? Or should we just accept that in fact nothing is 'free' and sharing our data is the price we have to pay for using many online services? As people are increasingly aware of and worried about data protection, governments and organizations are taking a more active role in protecting privacy. For example, the European Union passed the General Data Protection Law, which regulates how personal information is collected online. However, there is still much work to be done.

**D.**

As internet users, we should all have a say in how our data is used. It is important that we pay more attention to how data is acquired, where it is stored and how it is used. As the ways in which we use the internet continue to grow and change, we will need to stay informed and keep demanding new laws and regulations, and b
